PROJECTS

Predictive Queue Analytics & Digital Scheduling System

- This system will leverage real-time analytics to improve queuing and scheduling, addressing the operational problems by automating processes, reducing wait times, and enhancing the overall student experience.
- This study developed the Predictive Queue Analytics and Digital Scheduling System for Student Records Processing in a State University and College to improve queuing and scheduling operations in the Registrar's Office.

Trabahanap

- This innovative online application will enable companies, establishments, and contractors in Panabo City to post job openings, making it easier for job seekers to discover employment opportunities.
- With TrabaHanap, job seekers can directly access job listings, streamlining the application process.

MarSafe PH

- In innovative maritime safety mobile application designed to mitigate risks, enhance emergency responses, and improve maritime security.
- Protecting Fishermen, Seafarers, Port Authorities, and Coastal Communities across the Philippines.

Cup Gam

- The Cup Game app is made for people who enjoy fun and easy challenges. It is designed for players who like guessing games, quick thinking, and staying focused.
- The main purpose of the app is to give users simple entertainment and a short break from their daily activities. While playing, users can also improve their concentration, memory, and reaction time

EXPERIENCE

Student Web Developer / BSIT Developer

- Experienced in developing and improving web applications as part of academic and personal projects. Focused on building responsive UI layouts, adding new features, and fixing bugs in existing systems. Familiar with basic debugging, code refactoring, and implementing input validation and simple security practices to improve application stability.
